Theodora AI Overview

The X-Ray for Unconscious Bias

In today's lightning-fast world, hidden biases are capable of rapidly eroding trust and tarnishing even the brightest reputations. Theodora AI provides high-definition data points and actionable insights showing you where the weaknesses are so you can reinforce your structure with fairness and transparency.

Theodora Brain Lab

Neuroscience In Action to Understand Bias

Theodora is a rigorous scientific pursuit combining cutting-edge AI with the latest in neuroscience. Our neuroscientists help to highlight potential areas in the study of human cognition and bias; Theodora analyzes patterns of behavior and provides surprisingly correlations for further study.

Together we're rewiring how humans think about, approach, and solve biases.

The Inspiration Of Our Name

Theodora, the wife of Roman Emperor Justinian (527-565 A.D.), was an influential figure who advised Justinian on political and legal matters. Known as "partners in power," they worked together to shape many regulations of the empire. Despite her significant

contributions, Theodora's legacy was often minimized due to biases against her past professions linked to negative stereotypes at the time.

We chose to honor Empress Theodora recognizing her as a symbol of those who have been marginalized and overlooked due to discrimination throughout history.

This name reflects the company's mission to detect, mitigate, and measure biases, ensuring fairness and visibility for all.
